OXARO

AWS PRACTICE / CANADIAN PUBLIC SECTOR

Secure cloud. Mission-ready innovation.

AI Gateway Implementation & Management

Control how applications access approved AI models.

YOUR PROGRAM. YOUR NEXT CAPABILITY.

Teams connect applications to models independently, creating scattered credentials, inconsistent controls and unclear spending.

What we deliver

01 / DELIVER

Build your AI gateway

Implement application identities, approved model routes, usage limits and reporting in your AWS account.

02 / DELIVER

Manage the agreed gateway

Scope ongoing gateway management, coverage, included effort and changes around your approved applications.

What you receive

A dedicated gateway

Customer-specific code and integration contract.

Verified access and routing

Identity, route and usage-control tests.

Operating visibility

Usage reports, runbooks and exit guides.

BUILT FOR HIGH-TRUST ENVIRONMENTS

Agree scope, acceptance and operating ownership with your team. Delivery includes documentation and a practical handover.

Customer-specific implementation and optional management. Agree clients, providers, routes, processing destinations and coverage. AWS and model consumption are separate.

Let's build your next mission capability.

aws-solutions@oxaro.com

Private offer / Scope and fees agreed in your quote.
AWS consumption and third-party licences are separate.

Approved models. Controlled application access.

AI GATEWAY IMPLEMENTATION & MANAGEMENT / HOW IT WORKS

A CUSTOMER-SPECIFIC AI GATEWAY

Agree providers and processing destinations before enabling routes

APPLICATIONS
Authorized clients and integration needs

IDENTITIES
Application credentials and access policy

APPROVED ROUTES
Providers, models and processing destinations

↓ Route requests through the agreed gateway policy

CONTROLLED MODEL ACCESS

Authorize
Client identity and policy checks

Route
Approved models and usage limits

Report
Attributable usage and cost visibility

APPROVED MODEL RESPONSES TO YOUR APPLICATIONS

Integration contract / routing tests / usage reports / operating ownership

OXARO
Deliver the agreed scope, document results and transfer knowledge to your team.

CUSTOMER
Provide authorized access, accountable owners, acceptance decisions and customer approvals.

From agreed scope to accountable delivery

01
Agree routes
Confirm models and destinations.

02
Implement the gateway
Configure identity and limits.

03
Test integrations
Validate access and routing.

04
Manage agreed scope
Monitor usage and changes.

Illustrative and engagement-specific. Interfaces, access, scope, acceptance and responsibilities are agreed for each engagement. Customer approvals and security authorization remain with the customer.

Let's build your next mission capability.
