OXARO

AWS PRACTICE / CANADIAN PUBLIC SECTOR

Secure cloud. Mission-ready innovation.

Palantir Data Integrations

Connect your applications to authorized Palantir data flows.

YOUR PROGRAM. YOUR NEXT CAPABILITY.

An application needs dependable data from a Palantir deployment, including Maven where applicable, with known permissions and freshness.

What we deliver

01 / DELIVER

Plan the integration

Confirm authorized interfaces, permissions, data contracts and acceptance criteria.

02 / DELIVER

Connect your application

Build authentication, mapping, transformation, reconciliation and failure handling.

03 / DELIVER

Keep the data flow supported

Agree monitoring, freshness checks, support coverage and change responsibilities.

What you receive

An authorized data path

Integration code, configuration and contracts.

Evidence of reliability

Reconciliation, freshness and failure-path tests.

An application-team handover

Monitoring, runbooks and support responsibilities.

BUILT FOR HIGH-TRUST ENVIRONMENTS

Agree scope, acceptance and operating ownership with your team. Delivery includes documentation and a practical handover.

Confirm interfaces and permissions per deployment; Maven does not imply Foundry API availability. Palantir licences are excluded. No partnership or endorsement is claimed. Support covers agreed integrations and effort.

Let's build your next mission capability.

aws-solutions@oxaro.com

Private offer / Scope and fees agreed in your quote.
AWS consumption and third-party licences are separate.

Authorized data. Dependable application integration.

PALANTIR DATA INTEGRATIONS / HOW IT WORKS

PALANTIR DATA FLOWS INTO YOUR APPLICATION

Confirm interfaces and permissions for each deployment

PALANTIR DEPLOYMENT
Authorized data flows; Maven where applicable

DATA CONTRACT
Mappings, transformations and release restrictions

TARGET APPLICATION
Consumer requirements and acceptance criteria

↓ Use confirmed interfaces and approved authentication

AN OBSERVABLE INTEGRATION PATH

Transform
Map fields and apply agreed rules

Reconcile
Check completeness and data freshness

Recover
Handle failures and monitor delivery

APPLICATION-READY DATA WITH CLEAR OWNERSHIP

Integration code / data contracts / reconciliation evidence / runbooks

OXARO
Deliver the agreed scope, document results and transfer knowledge to your team.

CUSTOMER
Provide authorized access, accountable owners, acceptance decisions and customer approvals.

From agreed scope to accountable delivery

01
Confirm access
Validate interfaces and permissions.

02
Build the integration
Map, transform and authenticate.

03
Test the data flow
Reconcile and test failures.

04
Monitor and support
Apply the agreed support scope.

Illustrative and engagement-specific. Interfaces, access, scope, acceptance and responsibilities are agreed for each engagement. Customer approvals and security authorization remain with the customer.

Let's build your next mission capability.
